

Devarth V. Sambare

Unreal Engine Developer · Architectural Visualization & Real-Time 3D

devarthsambare123@gmail.com · +91-9082831419 · Vitawa – MH, India · [linkedin.com/in/devarth-sambare-2b8049218](https://www.linkedin.com/in/devarth-sambare-2b8049218)

OBJECTIVE

Unreal Engine developer specializing in real-time architectural visualization and immersive experiences — putting real properties, real surroundings, and real data into interactive 3D products for real estate and beyond.

EXPERIENCE

Agovthi — Unreal Engine Generalist

09/2024 – Present

- **Real Estate Archviz Platform (built for Quidich Innovation):** Developed a complete architectural visualization product commissioned by Quidich Innovation — the property rendered within its real surroundings using Cesium and Google Maps 3D tiles, with a cinematic lighting pass, a connectivity showcase, an amenities view, and custom unit search.
- **Krushvi VR – Educational Game (UP Government):** Built an educational VR game for the UP Government targeting the farming community, designed to train and inform farmers through immersive simulations covering modern agricultural practices and techniques.
- **Scout Guide Game (UP Government):** Developed a VR game for children attending the 19th National Jamboree, commissioned by the UP Government. The experience was enjoyed by over 3,000 children, delivering interactive and educational gameplay in an immersive virtual environment.
- **Cycle Game (Apollo Hospital):** Developed a competitive 1v1 cycling game using Unreal Engine for Apollo Hospital through Agovthi, with engaging real-time gameplay mechanics focused on health and fitness motivation.
- **Gameplay Design & Optimization:** Designed and optimized gameplay mechanics, UI, and overall game feel to create polished, immersive experiences, leading to a 25% increase in user engagement during testing sessions.

Unicorniz Innovation — Advanced VR Developer Intern

04/2024 – 08/2024 · earlier: VR Developer Intern, 03/2023 – 05/2023

- Engineered four virtual reality enhancements in Unreal Engine and Blender (smooth locomotion, teleportation, haptic feedback, guided interaction) that decreased user-reported motion sickness by 60%.
 - Upgraded the Cellular Jail VR project with AI-driven NPCs, interactive mechanics, and narrative elements; provided streamlined PCVR builds across multiple projects, improving frame rate by 30 FPS and ensuring smooth deployment.
 - Designed and upgraded immersive VR experiences like Barren Island VR and Cellular Jail VR, incorporating real-world data, AI-driven NPCs, interactive mechanics, and custom locomotion — three cross-platform deployments and a 70% increase in user session duration during internal testing.
-

REAL ESTATE VISUALIZATION

- **3D Gaussian Splatting:** Produced browser-explorable Gaussian splat captures of an Adani Group residential development in Pune and the Raymond building, delivered through web-based SuperSplat viewers — real structures, freely navigable in a browser tab.
 - **360° Virtual Tours:** Produced floor-by-floor browser tours built on professional drone photography, including Purva Miami at Breach Candy (“Experience the View” — sea/city views per floor with day, evening, and night states) and the Satyam project, both with landmark travel times pinned in the panorama.
-

PROJECTS

Real Estate Archviz Platform (Agovthi, for Quidich Innovation)

- Complete archviz product: real property in its real Google Maps surroundings via Cesium — connectivity, amenities, and custom unit search. Detailed under Experience.

Barren Island VR (Unicorniz Innovation)

- Created a realistic VR environment using Unreal Engine, Blender, and Gaia.
- Constructed an interactive VR environment featuring AI-driven NPCs utilizing behavior trees and pathfinding, yielding a 20% increase in user engagement based on NPC interaction duration.
- Optimized and packaged for standalone and PCVR.

Cellular Jail VR (Unicorniz Innovation)

- Fine-tuned VR project with AI-driven conversations and interactive storytelling.

- Enhanced for standalone and PC VR platforms.

Dicino (Mobile Puzzle game)

- Developed a dice puzzle game for a game jam, designing mechanics, models, and UI.
- Completed as a solo project, packaged for play.

JBM University VR

- Converted a SketchUp university design into an interactive VR experience.
- Presented at the UP Trade Expo 2023 to the President and Prime Minister.

SKILLS

Architectural Visualization · Lighting

3D Gaussian Splatting (SuperSplat)

Game Development · Scripting

VR/AR Development

UI/UX · Design Methodologies

Problem Solving

Cesium · Google Maps 3D Tiles

360° Tours · Drone Footage Integration

Game Design (level design, storytelling, character development)

3D Modeling / Animation

Testing, Debugging, Play Testing, QA

Worldbuilding

EDUCATION

B.Sc. – Computer Science, University of Mumbai (pursuing) · First Year CGPA 9.09
